

# Hydac Filters

## FILTER ELEMENTS OF HYDAC

By using original HYDAC filter elements, you benefit from:

- HIGH SYSTEM AVAILABILITY due to reliable filtration
- LONG ELEMENT LIFETIME due to highest dirt absorption capacities
- HIGH OPERATIONAL RELIABILITY due to outstanding purity classes

## THE HEARTH OF FILTERS

The pressurized liquid flows through the filter element and is thereby reliably freed of solid particles and foreign liquids.

Depending on the requirement and hydraulic filter design, different filter materials are used in surface and depth filters (coarse/ fine filters), filter fineness (1 to 200  $\mu\text{m}$ ) and designs (return/ suction/ pressure filter element).
